

THE MODULE HANDBOOK

FACULTY OF BIOLOGY

Paleobotany and Palynology

Module code	BIO 21007
Module level	1 st year of Undergraduate Program in Biology
Abbreviation, if applicable	-
Sub-heading, if applicable	-
Courses included in the module, if applicable	-
Semester/term	Odd
Module coordinator(s)	Dr. Ratna Susandarini, M.Sc.
Lecture(s)	Dr. Ratna Susandarini, M.Sc.
Language	Indonesia
Classification within the Curriculum	Elective course
Teaching format/class hours per week during the semester	This course is organized into one class and planned to have 14 teaching weeks and 2 weeks of examination.
Workload	Estimated working hour: 7 hours/week.
Credit points	2-0 credits
Requirements	Geology (TKG 1101)
Learning goals/competencies	<ol style="list-style-type: none">1. Knowledge and understanding<ol style="list-style-type: none">a. Types of plant fossils and their characteristics.b. Fossilization: environment and process.c. Extinct plant taxa: general features and their fossils: Lycopsidea, Sphenopsida, Filicopsida, Progymnospermopsida, Gymnospermopsida.d. The use of fossil data for reconstruction of plant phylogeny.2. Basic skill for<ol style="list-style-type: none">a. Observing external and internal structure of plant fossils.b. Collecting pollen and spore samples, both modern and fossils.c. Identifying pollen and spores.3. Ability to<ol style="list-style-type: none">a. Write a resume of scientific paper.b. Present personal opinion and work as a team.c. Communicate ideas (oral and written).

THE MODULE HANDBOOK

FACULTY OF BIOLOGY

Content	<p>The objectives of this course are to provide students with knowledge and understanding on plant fossils in relation to Plant Systematics and Evolution, biological aspects of pollen grains and spores, and to provide students with basic skill for identifying pollen and spores. Paleobotanical content includes introduction to types of plant fossils, fossilization media, fossilization processes, methods of fossil observation, description of plant fossil taxa, and application of fossils in phylogeny reconstruction. Palynological content includes morphology of pollen and spores, techniques for collecting pollen samples, methods of microscopic pollen slides, and applications of palynology in health, plant systematic, paleoecology, and oil exploration. Learning methods applied in this course are lectures, individual assignments, term papers, group discussion and presentation, and simulation of pollen identification. Assessment of this course is consisted of quizzes, individual assignments, group activities, midterm exam and final exam.</p>
Study/exam achievements	<ol style="list-style-type: none">1. Quizzes: 10%2. Individual paper (writing resume of scientific paper: 15 %)3. Group discussion and presentation: 20%4. Midterm exam: 25%5. Final exam: 30%
Forms of media	White board, notebook, specimen, LCD
