

THE MODULE HANDBOOK

FACULTY OF BIOLOGY

Plant Microtechnique

Module code	BIO 30603
Module level	Undergraduate
Abbreviation, if applicable	-
Sub-heading, if applicable	-
Courses included in the module, if applicable	-
Semester/ term	Odd and even
Module coordinator(s)	Drs. Sutikno, S.U.
Lecture(s)	Drs. Sutikno, S.U.
Language	Indonesia
Classification within the Curriculum	<ol style="list-style-type: none">1. Elective2. This subject consists of the comprehension of basic concepts, principles and theories related to the microscope and plant microscopic slides preparations
Teaching format/ class hours per week during the semester	Plant Microtechnique Course is given on the odd and even semester to S1 regular students in Faculty of Biology. Each week there are 1 meetings with time allocation of 50 minutes (Monday, at 12.00- 12.50 am) and 1 meeting of laboratory works.
Workload	This course consists of 1 credits of theory and 1 credit of laboratory works.
Credit points	1-1 credits
Requirements	Plant Structure and Development (BIO 20601)
Learning goals/ competencies	1. Knowledge and understanding Students have knowledge and understanding on: <ol style="list-style-type: none">a. The basic principle of physics associated with the microscope.b. The basic principles of chemistry associated with the process of anatomical slides preparation.c. The principles and theories related to the structure and development of plants.d. The basic procedure in anatomical slides preparation, so the students are able to explain that procedure.e. The role of Plant Microtechnique on the understanding of Biological Sciences.

THE MODULE HANDBOOK

FACULTY OF BIOLOGY

2. Ability/intellectual skill

Students have abilities to:

- Plan, implement and report a basic procedure in anatomical slides preparation.
- Analyze and solve a problem and develop a draft basic procedures in anatomical slides preparation.
- Integrate and evaluate information on the basic procedures in the anatomical slides preparation from various sources.

3. Practical skill

Students have practical skills to:

- Plan and implement anatomical slides preparation.
- Design and use laboratory equipments.
- Analyze the results of slides preparation especially on its failure and how to solve the problem.
- Use scientific references.
- Create and present technical reports scientifically.

4. Managerial and transferable skill

Students have managerial and transferable skills to:

- Communicate effectively (written, oral and picture).
- Apply physical and chemical principles in the field of Plant Microtechnique.
- Work in group.
- Apply and integrate Plant Microtechnique in Biological sciences.
- Use communication and information effectively.
- Arrange time resource effectively and efficiently.
- Study individually and effectively to develop professional work.

5. Attitude

Students have attitudes to be:

- Able to anticipate problems and find out problem solution related to Plant Microtechnique.
- Having curiosity.
- Sensitive on changes and problems related to Plant Microtechnique and able to find out solution.

Content

This subject consists of the comprehension of basic concepts, principles and theories related to the microscope and plant microscopic slides preparations. The topics of this subject consists of the use of equipment (microscopes, microtomes); microscopic slides preparation; observing, measuring, counting, photographing the components of cells, tissues or organs in plants.

Study/ exam achievements

1. Theory: midterm (35 %), final examination (45%), tasks (20 %)

THE MODULE HANDBOOK

FACULTY OF BIOLOGY

	2. Laboratory work: pretest (30 %), practical report (30 %), practical examination (40 %)
Forms of media	White board, LCD
