

THE MODULE HANDBOOK

FACULTY OF BIOLOGY

Paleozoology

Module code	BIO 41108
Module level	2 nd year of Undergraduate Program in Biology
Abbreviation, if applicable	-
Sub-heading, if applicable	-
Courses included in the module, if applicable	-
Semester/term	Odd
Module coordinator(s)	Drs. Bambang Agus Surtpto, S.U., M.Sc.
Lecture(s)	Drs. Bambang Agus Surtpto, S.U., M.Sc.
Language	Indonesia
Classification within the Curriculum	Elective course
Teaching format/class hours per week during the semester	This course is organized into one class and planned to have 14 teaching weeks and 2 weeks of examination.
Workload	Estimated working hour: 10,5 hours/week.
Credit points	2-1 credits
Requirements	Geology (TKG 1101)
Learning goals/competencies	<p>1. Learning achievement</p> <p>After studying these subjects in general students are expected to describe the whole of the diversity of vertebrate animals that once inhabited the territory of Indonesia , to know where they came from, why some of them extinct and the types of any of their descendants are now surviving and where they now reside. Specifically , students are expected:</p> <ol style="list-style-type: none">To understand the paleogeography and paleoecology Indonesian reconstruction in Sub - era Quarter / Period Pleistogen.To be able to explain the place of origin, time, route and manner of vertebrate animals migrate from the outside into the territory of Indonesi.To be able to explain the findings of fossils of fish , amphibians, reptiles, birds and mammal in Indonesia; especially the taxonomic identity, the site is found and the age of the geological and reconstruction paleoecology.

THE MODULE HANDBOOK

FACULTY OF BIOLOGY

- d. To understand the reason Indonesia has vertebrate animals with high levels of endemism, and
- e. Capable of performing the preparation method - observation and identification of fossils found in paleontological sites in Java.

2. Learning materials

This course is held as many as 13 face to face meetings with the following subject:

- a. A brief history, the significance and usefulness for the development of another field of studies
- b. Reconstruction of paleogeography and paleoecology of Indonesia in Quarter Sub-era/ Pleistogen Periode: Pleistocene Epoch
- c. Reconstruction of paleogeography and palaeoecology of Indonesia in Quarter Sub-era/ Pleistogen Periode: Holocene Epoch
- d. The place origin, time, route and way of vertebrate animals migrated from the Indian territory to the territory of Indonesia
- e. The place of origin, time, route and manner of vertebrate animals migrated from Indochina region into Indonesia
- f. Place of origin, time, route and manner of vertebrate animals migrated from areas of Australia into Indonesia
- g. The findings of fish and amphibian fossils in Indonesia: taxonomic identity, the sites, the age of the geological and paleo ecological reconstruction
- h. The findings of reptile fossils in Indonesia: taxonomic identity, the site, the age of the geological and paleo ecological reconstruction
- i. The findings of fossil birds in Indonesia I: taxonomic identity, the sites and the age of the geological and paleo ecological reconstruction
- j. The findings of bird fossil in Indonesia II: taxonomic identity, the sites, the age of the geological and paleo ecological reconstruction
- k. The findings of fossil mammal in Indonesia I: taxonomic identity, the site is found and the age of the geological and paleo ecological reconstruction
- l. The findings of fossil mammal in Indonesia II: taxonomic identity, the sites, the age of the geological and paleo ecological reconstruction
- m. The high of vertebrate animal endemism in Indonesia

Content

Paleozoology lecture is more emphasis on knowledge of vertebrate fossils found in Indonesia which are already extinct, still survive in Indonesia, or already extinct in Indonesia but still living in another country. Paleozoology

THE MODULE HANDBOOK

FACULTY OF BIOLOGY

	<p>course in the Faculty of Biology is a branch of the rare if not the only one in Indonesia. This option course is intended for upper level students who want to open up opportunities for him to join the community of paleontologists in Indonesia whose members are mostly just not background biologist. In this course include an introduction that discusses the short history, significance and usefulness paleozoology for the development of other sciences; reconstruction of the paleogeography and paleoecology Indonesia in Sub-era Quarter / Period Pleistogen; vertebrate animal migration from outside Indonesia to Indonesian territory: the place of origin, time, route and manner; age and location finding fossils of fish, amphibians, reptiles, birds and mammal in Indonesia: taxonomic identity, the site is found and the age of the geological and reconstruction paleoecology; and the reason Indonesia has vertebrata animals with a high degree of endemicity. In the exercise practicum taught how-preparation techniques of observation and identification of fossil vertebrates, especially the fossils found in paleontological sites in Java.</p>
Study/exam achievements	<ol style="list-style-type: none">1. Midterm: 25 %2. Final examination: 50%3. Field trip/laboratory work: 30 %4. Project report: 10 %5. Assignment: 5 %6. Quiz: 10 %
Forms of media	White board, notebook, LCD
Literature	<ol style="list-style-type: none">1. Bergh, van den G.D., J. de Vos, and P.Y. Sondaar, 2001.
